It looks like someone has posted a cracked version of this software - I don't think you will be able to get this version to work or help you with your question. But let's try it and see. Open the crack you got and try to run it. It probably will not work because it is not a legit license, but you can try it and see. If it does not work, then you have your answer. If it does work, then you will need to talk to the owner of the cracked software to get a legit license key. If you cannot get an answer to your question on StackOverflow then let's try again. Comparative assessment of airway function by nitrogen washout, multiple breath washout, and pulse oximetry in patients with acute asthma. To evaluate the validity of peripheral oxygen saturation (SpO2) as a surrogate for arterial oxygen saturation (SaO2) in patients with acute asthma, and to compare the accuracy of a standard airway function test (nitrogen washout [N2WO]) with that of multiple breath washout (MBW). Prospective study. University-affiliated medical center. Forty-three subjects (age range, 17-65 yrs) with acute asthma. None. None. We simultaneously measured, using the second method, both SpO2 and SaO2 on the same side during an asthma attack and also during a methacholine-induced bronchial challenge (provocation). We also compared the measures of SpO2 and SaO2 during an acute asthma attack with the values obtained during a methacholine challenge. We also compared the measured parameters with airway function determined by N2WO (carbon monoxide (CO) elimination and
