
Buying Op-com Software V3.45 for 2010 Passat.

Op-com Software 100820b . Image with no alt text. Download: About The Files on Op-com Ati 9700 Software A: That information was simply not correct (it's not at all likely to be the latest). In fact, the current version appears to be 100820h (1.36 as of this writing), which is newer than 100820b that has been linked to several places. I haven't found any way of getting the version without downloading the software, however.

1. Field of the Invention The present invention relates generally to an image forming apparatus and a method for manufacturing the same. More specifically, the present invention relates to an image forming apparatus that has a charging device, a transfer device, and an image carrier, and a method for manufacturing the same.

2. Description of the Related Art An image forming apparatus such as a printer and a multi-functional peripheral (MFP) that includes functions of a printer, a copying machine, a scanner, a facsimile, a plotter, and the like receives image data from a computer and forms an image on paper, an overhead transparency film, or the like according to the image data. Such an image forming apparatus includes, for example, a photoconductor drum on which an electrostatic latent image is formed and a developing device that develops the electrostatic latent image on the photoconductor drum to form a toner image. A transfer device transfers the toner image onto a sheet. The photoconductor drum is generally in the form of a hollow cylinder having a rotary shaft fixed to the center of the photoconductor drum. The photoconductor drum is generally coated with a photosensitive material such as a charge generating material and a charge transporting material. A plurality of electrical conductive wires (hereinafter, referred to as "charging wires") are wound around the surface of the photoconductor drum and are brought into contact with the surface of the photoconductor drum. A charging device applies a predetermined voltage across the surface of the photoconductor drum and the charging wires. An alternating current is applied to the photoconductor drum and the charging wires by the voltage. An electrostatic latent image is formed on the photoconductor drum by discharging due to the AC current. Since an AC current is applied to the photoconductor drum during the charging process in the conventional charging device, the charging wires are heated due to the resistance thereof. When the charging wires are heated, the charging wires may
