trademark and software license rights owners and copyrights... For  $y = (4, 4^6, 12)$ , the  $\text{diff}(y)$  operation returns the value  $(4, 4^{10}, 18)$ . Similar results can be obtained for other types of data. By default, MS Excel uses the "Numeric" format as argument values, which corresponds to the usual numeric data type. Numeric formats for dates and times can be found on the Standard tab of the Format Cells dialog box. In this dialog box, you can also specify the number of decimal places for numbers, as well as the number of decimal places for dates and times.
