AutoCAD 2018 is a Desktop CAD application that is designed to be used as a "guideline" for creating 2D drawings, such as plans, technical illustrations and schematics. It allows you to easily create a 2D drawing in AutoCAD by drawing line, polyline or polygon based elements and then choosing to convert the drawing to an Autocad DXF or DWG file. AutoCAD is also a powerful computer-aided design (CAD) application for architectural, engineering, and construction drawing. Mobile AutoCAD is an app that allows users to view or edit files and share documents from a smartphone or tablet. This mobile app allows users to create and view 2D drawings on a mobile device. The mobile version is free to download and can be used on both Android and iOS devices. The mobile app allows you to create a new drawing or open a drawing in a new project, delete existing drawings, save and open files, and move, copy and paste files. AutoCAD and AutoCAD LT are the first and second editions of the AutoCAD and AutoCAD LT families of software products designed and marketed by Autodesk. In 1987, Autodesk developed the Autodesk AutoCAD, which was released to the public in November 1987. The first version of AutoCAD (inclusive of AutoCAD LT) required an Intel 8086 or equivalent x86 CPU running at 16MHz. AutoCAD LT came out later in 1988 and was targeted at the architectural, engineering, and construction markets. With the introduction of AutoCAD LT, all of the Autodesk AutoCAD, AutoCAD LT, AutoCAD Web and AutoCAD 2012 applications were discontinued, and the only product remaining under the Autodesk AutoCAD name was AutoCAD, which was targeted towards the general engineering and architectural markets. Software and hardware requirements for the earlier versions of AutoCAD AutoCAD 2016 (Desktop) is a Computer-Aided Design (CAD) and drafting software application. Developed and marketed by Autodesk, AutoCAD was first released in March 1996 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each

MACRO/RUN macros The most powerful of these is the System Autodesk Exchange. An Exchange macro will run when certain actions occur within the drawing program such as opening, closing, saving, importing a drawing, exporting a drawing, viewing and printing. Automation macros are typically used with any system that has an API such as Application Programming Interface (API) for MacroAutodesk Exchange (MAE). Macros are classified as "standalone" or "script". A standalone macro is independent of the drawing whereas a script must be associated with a drawing or feature. Macros can also be created using the Visual LISP language. The most common use of macros is to automate the drawing process, such as converting objects from one layer to another, convert objects from one style to another, or drawing full plans. While they are not required, macros can also be created to draw features or edit text within the drawing. Automation macros are a significant source of revenue for Autodesk. As of October 2009, Autodesk stated that the total number of macros used worldwide exceeded three million. Custom Functionality The custom functionality offered by AutoCAD are also included as part of the Autodesk Exchange Apps. There are a large number of 3rd-party tools available on the Autodesk Exchange App. This functionality is typically categorized as to 'geometry manipulation'. Collaboration and interoperability Since 2000, AutoCAD has supported many of the exchange formats. An interoperability solution is provided through the help of the Autodesk Exchange Client. This provides access to the Exchange API from other languages and platforms. These include Java, C++, Visual LISP, VBA, C#, and C++ Builder. Autodesk Exchange App The Autodesk Exchange App is an Autodesk Add-On available on the Autodesk App Store for Android and iOS devices. It contains over 30 applications, but also can include apps that provide Autodesk Exchange services. Most of the Exchange apps on the App Store are from 3rd-party developers, and can be categorized as "AutoCAD Plugins". While not required, many Exchange plugins can be viewed through the desktop version of Autodesk Exchange. Software based DWG2PDF The DWG2PDF

What's New In?

Line Art: Bring your professional style of drawing to AutoCAD with new line art capabilities. Any portion of a line art drawing can now be edited and updated. (video: 2:36 min.) Engineered Drawings: The Xref table functionality in object references is now available when creating an engineered drawing. (video: 4:16 min.) Tile and Layer Management: The layer and grid management functionality for making changes, arranging views, and finding views, has been reworked. The Insert, Modify, and Delete commands have been replaced with Views for quicker use. (video: 1:28 min.) Easier to Use: The tool bar and ribbon palette are now more customizable. You can now customize your tool bar and ribbon to add more frequently used functions, remove superfluous options, and rearrange where options appear on the tool bar and ribbon palette. The drawing/layer control panel is now accessible from the tool bar. The drawing/layer control panel allows you to view and manage your views, groups, layers, and transparency groups. (video: 3:59 min.) Stylistic Alternates: The text formatting of AutoCAD has changed significantly. More controls have been added to the paragraph formatting window, such as alternative characters, font types, line spacing, and font styles. This improves overall readability and lets you apply font styles easily. (video: 2:03 min.) Xref: AutoCAD® 2014 introduced the Xref command. The Xref command was used for finding out the type and location of features, layers, etc., and was useful for tracking changes to the drawing. The command now supports several new features for users, including: – Create a cross-reference table – Import the cross-reference table – Extract the Xref table – Import the Xref table – Export the Xref table (Exports can be sent to AutoCAD or a PC program.) Docking and Undocking: The docking functionality has been added to the ribbon toolbar, to make it easier to dock other applications such as a web browser. The docking functionality is also accessible from the context menu on the task pane. The user interface has been changed to ensure that the docking/undocking is more consistent between all of the ribbon functions. Macros
