Photoshop is a fast program and has advanced features, but it also has a few limitations. For example, you cannot use the program when the computer is running on battery power, such as a tablet, smartphone, and so on. If your computer is not on charge (plugged in) or if you have a weak electrical current, Adobe has moved the program to a web-based app that offers a much smaller file size but still provides much of the editing function. The drawback is that Photoshop is desktop only. Figure 12-1 shows an artist's rendering of the New York City skyline that was done with the Photoshop Elements program. **Figure 12-1:** The New York City skyline image was created with Photoshop Elements. Photoshop (Illustrator) Adobe Illustrator is a rapid prototype and illustration program that enables you to create a wide range of complex shapes and features, including letters and borders. It is a vector-based drawing program that works with graphics and text files, including Illustrator's own Vector format (.ai or.eps), Adobe's Portable Document Format (PDF), and HTML web pages. The Illustrator program uses a point-based system with a collection of customizable tools that give you the ability to build your artwork. You can choose from a variety of shapes, tools, and drawing brushes, and you can also change the color and style of your work at any time. Illustrator's drawing tools enable you to create a type of vector-based file that's ideal for print production and web publishing. In addition to all this, Illustrator supports Photoshop PSD and EPS formats, including transparency and color. Figure 12-2 shows a sketch that was created in Illustrator and printed as an 8-by-10-inch matte on high-gloss paper. Photoshop Elements Photoshop Elements is a smaller, more stripped down version of the Photoshop software that was originally developed by Adobe in 2001. Adobe updates Photoshop Elements on a quarterly basis, so as of this writing, it is newer than Photoshop CS5. It's designed for people who want a lighter, lower cost version of Photoshop. Photoshop Elements is mainly a way to create GIFs, which means that you can create simple animation and decorative effects. The program provides a more basic drawing experience and is designed primarily for creating icons, graphics, and other images that you may want to print in the future. **Figure 12-2:** This

[Acute intermittent porphyria in a patient with Wegener's granulomatosis]. A 74-year-old man was found to have fever and productive cough on a journey to Hong Kong. After return to Japan, he noticed purpura and swelling of the eyelid after sunlight exposure. Laboratory findings revealed anemia, leukocytopenia, increased concentration of serum creatinine, and high titer of antineutrophil cytoplasmic antibodies. He was diagnosed with Wegener's granulomatosis. Erythrocyte porphyrin and uroporphyrin increased with erythrocyte decrease, and clinical manifestations were consistent with acute intermittent porphyria. He was admitted to hospital because of abdominal pain and high-grade fever. While on treatment, acute intermittent porphyria was confirmed, and he was successfully treated with intravenous cephalosporin. In this report, we discuss the association between chronic disease and acute intermittent porphyria.Santos released the newly re-branded Elefante Alefa to commemorate the finale of the FIFA World Cup Brazil 2014. French police moved in on Saturday to dismantle a firework factory that is thought to be the largest in Europe, and which allegedly has links to a jihadist network inside Syria. France24.com reports that scores of men and women and a significant number of schoolchildren are thought to have been turned away when anti-riot police stormed the factory on Friday. Police reports said the factory produces firecrackers and explosives and sells them to Syrians in France. (There was no word on whether the police also busted one of the largest sports-supply stores in France.) The firework factory, known as SAM (Système Amplifiant Mathématiques), is in the suburbs of Paris. Last year, the French parliament – responding to the bombing in the Paris Metro tunnels in which scores of people, mostly young people, were killed – ordered the deportation of all Syrian refugees after they had received France residency. A social affairs ministry report of last year shows that of about 4,800 people expelled over that summer, fewer than 200 had gone back. The report also said that about one in three expelled people was found to be a jihadist. And the problem hasn't gone away: a November 20 report by CNDS police, which tracks jihadists, said that between two-thirds and three-quarters of all the jihadists sent to prison since the start of the conflict in Syria were released because of amnesty laws – or because they were not charged. Citing security sources, the news agency said that the factory in Viry-Chatillon is the largest in Europe and has links to a jihadist network inside Syria. Francois Molins, the Paris prosecutor, told reporters at a news conference: "This is a major crime scene." He didn't give the exact location. "We want to restore the detonations and the explosives that were stored at the premises," said a source at the scene. The aim is to bring the factory owners and the security services to justice. The suspect is thought to be one of two brothers, Mahmoud and Nabil B. At least 10 Syrians have been arrested in the region; one of them is thought to be a member of the jihadist grouping linked to al-Qaeda. The arrest and the confiscation of the factory has reopened the debate in France over Syria. Commenting to France 24, a French firefighter, Philippe Lejade, said: "I'm
